ez Do-It-Yourself Installation

Your plumbing may look different. These are simply two examples of Contamin-Eater Installations. Please also read complete installation instructions.

You will need:
A - (2) Male adaptors for inlet and outlet of filter and heavy duty or gas grade teflon tape.
B - (4) 3/4” elbows. Copper or CPVC
B* If you do not want to glue or solder, you may use Gator-bite (Lowe’s) or Sharkbite 3/4” elbows. They cost more, but make the job very ez.
C - 2-3 ft. pipe. Copper, CPVC or PEX.

* If you are soldering copper pipe, be careful to solder at least 6” away from the filter so that you do not overheat the filter. Heat damage will void warranty, and we don’t want that!

If your water line comes in from the right and flows to the left, please note this on your order. We are happy to build your filter with the inlet on the right and the outlet on the left.
